My name is Nadezda Chernysheva.

My date of birth is the 14th of July, 1976.

I graduated Mari State Technical University in 1998.

My profession after University is Mechanical Engineer in Machine-building.
Now, I am the Technologist in Manufacture PM Parts. I have worked in Special design Technological office “Kristall” during seven years, from 1998.

My usually work is design technological process of new parts, analysis of defective goods, technologic support manufacture processes: pressing, sintering, sizing and steam treatment.

Four years ago, I designed technological processes of group powder parts for refrigerator hermetic compressor. The powder parts of compressor must been hermetic in pressure 16-25 atmosphere of work gas Freon. Impermeability was made by steam treatment.

Today, my researching theme is sintering plastic powder material in endothermic gas.

My hobbies: I like good rest in activities: skiing at winter, to go for walking in to forest, to gather mushrooms and berries. I like to read philosophic and historic books.

I'd like to wish everyone good luck in his job!
